

THE BEST CORROSION CONTROL PERFORMANCE, GUARANTEED!

Product Description

TERMARUST® SERIES TR2200HS HRCSA (HIGH RATIO CO-POLYMERIZED CALCIUM SULFONATE) 100% SOLIDS (No VOC), PENETRANT/SEALER

High performance HRCSA Penetrant Sealer that is designed to stay active in joints, connections, bearings, pin connections and inaccessible areas which cannot be cleaned properly.

HRCSA = High Ratio Co-Polymerized Calcium Sulfonate
(Minimum 15% active sulfonate, must maintain a 9-11 to 1 ± 2% ratio Total Base Number to Active Sulfonate i.e.: Total base number of 135 to 165 to 15% Active Sulfonate as determined by Titration Testing (See Termarust technical dept. for testing protocols).

Termarust® Series TR2200HS HRCSA Penetrant/Sealer's chemistry is 100% solids, No VOC. It neutralizes acidity, displaces moisture, scavenges oxygen and chemically neutralizes the crevice corroded and pack rusted joints and connections, stopping further corrosion.

USES: Due to Series TR2200HS HRCSA's low viscosity and chemistry, it has the ability not only to neutralize acidity, and form a flexible seal; it is also the ideal solution in applications with:

- Pack rusted joints – crevices;
- Connections and back to back angles;
- Corrosion frozen bearings;
- Steel structures such as: bridges, towers, cracks, cable suspension systems;
- On steel structures that vibrate, expand and contract due to temperature (climate);
- Where a penetrating, moisture scavenging, acid neutralizing corrosion inhibitor is necessary.
